Professional Summary

Frontend Developer with 1.8 years of experience building responsive, accessible, and performance-driven web applications using React, Next.js, HTML, CSS, and JavaScript. Delivered 45+ websites and dashboards through teamwork, API integrations, and deployment automation. Interested in implementing intelligent and data-driven web features such as automated analytics and smart search to enhance user experience.

Education

Arjun College of Technology and Science, Hyderabad
Jawaharlal Nehru Technological University
B.Tech – Mechanical Engineering

Sept 2021 – Sept 2023

Experience

- Jr.Frontend Developer, EVEGA Technologies LLP Hyderabad** May 2024 – Present
- Developed and maintained 45+ responsive, SEO-optimized websites using HTML5, CSS3, JavaScript, PHP, and React.js.
 - Built scalable, high-performance user interfaces with React.js and Next.js, focusing on UX, accessibility, and responsiveness.
 - Integrated analytics tools (Google Analytics, Search Console, Meta Pixel) to monitor user engagement and performance.
 - Deployed and managed applications via FileZilla, cPanel, Vercel, and Netlify; handled DNS, SSL, CI/CD, and caching.
 - Implemented SEO strategies, including structured metadata, schema markup, keyword optimization, and technical SEO improvements.
 - Applied performance optimizations using lazy loading, image compression, and CDN integration.
 - Collaborated closely with design and backend teams to deliver full-stack web solutions.
 - Enhanced website rankings by applying SEO best practices, including keyword research, meta-tag optimization, high-quality content structuring, and search-intent analysis.

Skills

Languages: HTML5, CSS3, JavaScript, TypeScript, PHP, Java, Python

Frameworks: React.js, Next.js, Spring Boot, Express.js

Frontend: Bootstrap, Tailwind CSS

Databases: MySQL, MongoDB, PostgreSQL

Tools: Git, GitHub, VS Code, FileZilla, cPanel, Vercel, Netlify, Postman, Figma

Testing: Jest, React Testing Library, Website Speed Testing (PageSpeed Insights, GTmetrix, Lighthouse)

Concepts: REST APIs, JWT Auth, SEO, Responsive Design, Agile, CI/CD, UI/UX Collaboration

Projects

Wallet-to-Wallet Transfer Website

[View Code →](#)

React • Spring Boot • SQL

- Developed a real-time fund transfer platform with secure JWT-based authentication and API protection.
- Implemented a lightweight AI module to detect suspicious or repeated transfer patterns and notify users.

Flight Booking Website

[View Code →](#)

React • Spring Boot • MongoDB

- Built a secure flight booking portal featuring JWT authentication and dynamic search filters.
- Added a recommendation engine that suggests routes based on user search and booking history.

Hospital Management System

[View Code →](#)

Java • JDBC • MySQL

- Developed a desktop application for hospital operations including billing, patient data, and records.
- Automated appointment reminders and generated daily performance statistics for administrators.

Employee Management System

[View Code →](#)

PHP • MySQL • JavaScript

- Created an internal portal for employee CRUD operations, attendance tracking, and performance insights.
- Integrated an AI-based attendance anomaly detector to flag irregular patterns and send automated alerts.
